

Senior Architect / Sustainable Design Manager

Throughout my career I've been developing both, my aesthetic sense and my skills for understanding the spatial and formal creation of a better space environment in which we can develop our social abilities; I believe in an architecture with social responsibility that must aim to improve and dignify the living conditions of the human being by meeting their immediate needs without compromising those of future generations, seeking a balance between the physical object and its natural environment in search of a viable and sustainable habitat
